

EGG TRANSPORT SYSTEM

The FUTURE in Egg Transportation... Is Here Today!

The COOL EGGSPRESS™ Egg Transport System is the NEWEST and most dynamic innovation for the egg industry in years. With new USDA guidelines on the horizon, consider the benefits and savings this new system will bring to your entire operation.

#1 HEALTH & SANITATION...

- Non-porous surface... Easy to clean and stays cleaner longer.

Dirt and residue is easily removed from our non-porous surface.

- More efficient and effective washdown results in a healthier environment.
- Faster, better and uniform cooling of ALL eggs, from top to bottom, as well as inside and out.
- Reduces possibility of transporting disease from one site to another.
- Microbial additives available upon request.
- Panels can fit through most industry Automatic Washer Systems, for easier and more thorough sanitation.

#2 PLASTIC vs WOOD...

- UV protected plastic material... provides sunlight protection and prohibits materials from becoming brittle, which eliminates damage over time.
- Weather resistant, eliminating warping, versus a plywood system that deteriorates from sunlight or outdoor storage.
- Non-porous material provides a more sanitary surface, easier to clean vs plywood that absorbs dirt and is virtually impossible to keep clean.
- Patented air flow system provides uniform cooling, vs plywood systems that trap hot air.
- Designed to be stronger and more durable for less loss vs a plywood system.
- Safer than plywood... eliminates wood related injuries... no more splinters, no more cuts and

scrapes from nails, staples or rusting metal supports. The patented hand-held design eliminates pinched fingers from wrestling with plywood shelf system.

- Specially designed shelves keeps flats from shifting during transit.

Old plywood trays retain dirt and disease. Watch out for those splinters!

#3 MAJOR COSTS SAVINGS...

The COOL Eggspress™ System will save you money, in many areas of your operation!

Reduced Maintenance Costs...

- 3 year warranty.
- UV Protected Plastic lowers maintenance costs for the life of the system.
- Lower annual costs than wood systems.
- Stronger design = less breakage = less replacement cost.
- Entire COOL Eggspress™ System is designed to be stronger, more durable, with a 7 to 10 year life.

Reduced Cleaning Costs...

- Non-porous polyethylene material reduces clean up time.

Reduced Inventory/Storage Costs...

- Easier to stack, know exact quantities on hand.
- More uniform space storage.

Reduced Loading Costs...

- Tongue & groove design makes loading eggs from both sides faster and easier.
- Eliminates need for top cover egg flats... cardboard corners... and shrink wrap!

Reduced Handling Costs...

- Patented hand-hold design provides faster assembly and disassembly.
- Pallet is designed for pickup from either side, by hand-truck, forklift or power trucks.
- 5 tier design provides even weight distribution resulting in reduced damage.

Reduced Shipping Costs...

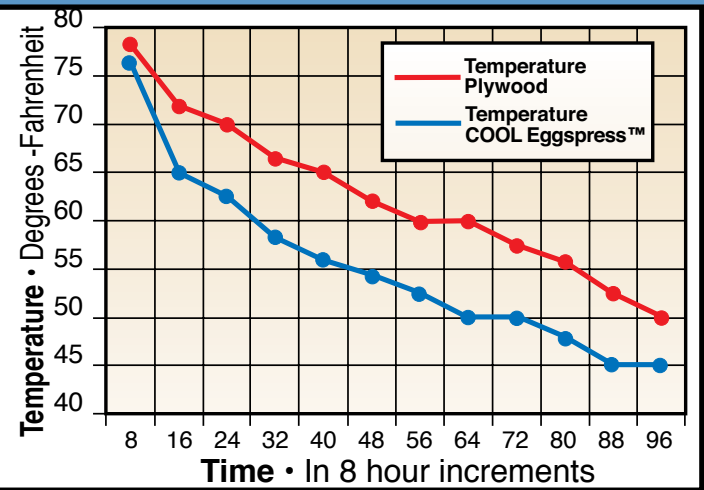

- 23 COOL Eggspress™ pallets in a trailer vs 20 wooden pallets...
- 15% more racks in each truck = 15% increase in shipped product = 15% reduction in shipping costs.

#4 DESIGNED FOR YOU...

- Size - 49 in. x 37 in. Fits in a trailer either way.
- Field-engineered and tested for over ten years.
- Positive, locking dividers for easy loading.
- Easy to assemble and disassemble.
- Patented dimple holding pattern on each tier reduces egg flat movement.
- Usable in smaller sites as well as large operations.
- Patented tongue & groove design makes system more solid/rigid. Fitted pieces provide less rocking and tilting during shipment, which reduces egg loss.

The COOL Eggspress™ system is designed for easy clean up, easy assembly, easy handling, easy storage and long lasting strength and durability.

The old plywood transport systems have been around for years. They are unstable, hard to keep clean, clumsy to handle and need to be repaired or replaced on a regular basis.

Plywood transport systems retain heat when shrink wrapped. Rocking and tilting makes loading and storing more difficult.

The COOL Eggspress™ egg transport system allows heat to escape w/o shrink wrap and it remains upright and straight with our patented high density polyethylene tongue & groove fitted pieces.

#5 BEAT THE CLOCK...

- The COOL Eggspress™ System will give you a jump on pending and/or proposed USDA shipping, cooling and cleanliness guidelines.
- The COOL Eggspress™ System uses USDA Approved materials.
- The COOL Eggspress™ System reduces the microbial risks with processing materials, for HACCP hazard analysis.
- The COOL Eggspress™ System is environmentally friendly... and 100% recyclable.

#6 QUANTITY PRICING...

- Quantity pricing is available from the exclusive distributor of COOL Eggspress™ Saybrook Marketing Group, Inc.
